This is the first multi-volume collection of major writings on cultural anthropology, the sub-field of anthropology which is concerned with how people in different places live and understand the world around them. It covers key methodologies (participant observation, ethnography) and topics (kinship, ritual, values) and maps the development of the field from its beginnings in the mid-nineteenth century through to recent and current debates on the 'critique of anthropology' and the rise of new methodologies such as multi-sited research. The four volumes are arranged thematically and each is separately introduced. Drawing upon essays from anthropology and related disciplines, the volumes together chart the origins of the field, explore its core theories and methods, and trace the proliferation of sub-fields that it has generated, including anthropology of art, urban anthropology, medical anthropology and the anthropology of gender and sexuality. With key texts from James George Frazer, Lewis Henry Morgan, Bronislaw Malinowski, Franz Boas, Ruth Benedict, Margaret Mead, Lucy Mair, Claude Levi Strauss, Melford Spiro, Marshall Sahlins, Laura Nader, Maurice Godelier, David Graeber, Suad Joseph and many more, this set is an essential resource for scholars and students of the subject.

This concise lab manual moves beyond "cookbook"-style lab instruction to help you develop the investigative skills required for a successful career in health care. Consistently emphasizing the relationship between structure and function, author Stephen Sarikas guides you in predicting outcomes and interpreting what you experience in the lab. Through the use of an engaging "connected learning" technique, each exercise step builds on the last to help you understand complex ideas and make connections between concepts. Book jacket.

From the bestselling 1001 series, comes a collection of 1001 quotations from numerous brilliant minds of the Ancient World through to the present day. With quotes from everyone including Marcus Aurelius, Sun Tzu, Shakespeare and Nietzsche through to Ellen DeGeneres, Nelson Mandela, Mark Zuckerberg and Monty Python's Flying Circus, there is an immense range of ideas, witticisms and musings to ponder. The quotations cover a wide range of topics, including art and literature, culture, philosophy, politics, psychology and religion, made accessible and brought to life by being placed in their historical contexts and accompanied by a wealth of illustrations.

Feeling limited by circumstances, substances, or behaviors often leads to the simple, yet profound question, "Is this all there is?" This question is an opportunity to rediscover one's truth and live life more fully and authentically. Spirit Recovery Medicine Bag offers readers a path to finding their personal answer to this question in an engaging two-part format. In Part One, readers will join Lee McCormick as he reflects on his personal journey of recovery and transformation—a journey that initiated him into a life of helping others recover their own sense of self and purpose. Part Two is a medicine bag of healing practices designed to guide readers in developing self-awareness and awakening their sense of power—specifically the power of choice rooted in personal values and commitment to living those values. Covering a variety of topics addressing spirituality, awareness, and consciousness, the authors pose questions for reflection and self-investigation along the way. Spirit Recovery Medicine Bag is not a negation of Twelve-Step recovery, but a tool for expanding awareness and increasing involvement regardless of the path one is walking. In Twelve-Step language, it builds on Step 12's direction to practice these principles in all one's affairs. The authors believe that the inner journey to one's truth and the creative expression of that truth make for a good definition of spirituality, and they offer readers a very real message of the possibility of living "happy, joyous, and free" through spirit recovery.

Analysis (sometimes called Real Analysis or Advanced Calculus) is a core subject in most undergraduate mathematics degrees. It is elegant, clever and rewarding to learn, but it is hard. Even the best students find it challenging, and those who are unprepared often find it incomprehensible at first. This book aims to ensure that no student need be unprepared. It is not like other Analysis books. It is not a textbook containing standard content. Rather, it is designed to be read before arriving at university and/or before starting an Analysis course, or as a companion text once a course is begun. It provides a friendly and readable introduction to the subject by building on the student's existing understanding of six key topics: sequences, series, continuity, differentiability, integrability and the real numbers. It explains how mathematicians develop and use sophisticated formal versions of these ideas, and provides a detailed introduction to the central definitions, theorems and proofs, pointing out typical areas of difficulty and confusion and explaining how to overcome these. The book also provides study advice focused on the skills that students need if they are to build on this introduction and learn successfully in their own Analysis courses: it explains how to understand definitions, theorems and proofs by relating them to examples and diagrams, how to think productively about proofs, and how theories are taught in lectures and books on advanced mathematics. It also offers practical guidance on strategies for effective study planning. The advice throughout is research based and is presented in an engaging style that will be accessible to students who are new to advanced abstract mathematics.

How does the economy of a Western nation-state simply run out of money? Why did the London arm of a US corporation bet an amount more than the total GDP of the European Union on US housing? How can a banking system become so unregulated that it offers a gold credit card to a dog? For Channel 4's Editor Faisal Islam, these are examples of nations, institutions, and individuals crossing the 'default line', the point at which the optimism of economic boom flips into fiscal madness - with far-reaching and disastrous results. Having exposed the the Icelandic banking crisis, watched Lehman Bros crash, investigated emerging economies in India and China and interviewed such players as the UK premier and the President of the World Bank, Faisal Islam is the perfect guide to the new landscape of the global financial crisis. From New York to Singapore and from Moscow to Merseyside, he identifies and explains its causes and describes its impact on the lives of ordinary people with exemplary clarity.

Is nature all there is? John Haught examines this question and in doing so addresses a fundamental issue in the dialogue of science with religion. The belief that nature is all there is and that no overall purpose exists in the universe is known broadly as 'naturalism'. Naturalism, in this context, denies the existence of any realities distinct from the natural world and human culture. Since the rise of science in the modern world has had so much influence on naturalism's intellectual acceptance, the author focuses on 'scientific' naturalism and the way in which its defenders are now attempting to put a distance between contemporary thought and humanity's religious traditions. Haught seeks to provide a reasonable, scientifically informed alternative to naturalism. His approach will provide the basis for lively discussion among students, scholars, scientists, theologians and intellectually curious people in general.

The first edition of Percorsi quickly became one of the best-selling elementary Italian texts. The new second edition features a new design, more focus on skills-development, updated cultural information and a full version of MyItalianLab. Percorsi is an introductory program that promotes the acquisition of Italian language and culture through the integration of the "5 Cs" principles of the National Standards for Foreign Language Education. Percorsi is designed to provide beginning learners with a variety of tools to develop their communicative competence in the four major language skills—listening, speaking, reading, and writing—as they acquire familiarity with Italian culture. All of the features in Percorsi have been carefully thought out to support the two key aspects of the language acquisition process: language comprehension and language production. From the start, carefully structured communicative activities based on authentic materials and texts encourage students to use Italian in everyday situations. Generous use of authentic content also offers students a chance to develop reading skills while gaining cultural awareness and understanding of Italian communities and traditions throughout the world. In addition, each chapter explicitly promotes cultural exploration through illustrated presentations that are followed by activities facilitating comprehension and highlighting cultural comparisons. Students are encouraged to analyze and compare extremely varied aspects of Italian culture while making connections to their own experiences. MyItalianLab will be available for Fall 2011 courses.

In this investigation of the administrative structures of the Seventh-day Adventist church, Oliver examines the historical precursors of reorganization during the years of 1888-1903. He proposes reasons for the reorganization of the church in 1901-1903 and ascertains how the principles involved were related to soteriology, ecclesiology, eschatological vision, and the sense of mission in the church. Oliver makes applications to the continuously changing contemporary church.

Squamous cell cancers of the head and neck (SCCHN), also known as head and neck cancers (HNC) encompass malignancies of the oral cavity, larynx, nasopharynx and pharynx, and are diagnosed in over 500,000 patients worldwide each year, accounting for 5% of all malignancies. In the past several years, there have been significant developments in understanding of HNC. It is now recognized that although alcohol and tobacco use has represented the likely predominant cause of SCCHN, the incidence of a second class of SCCHN related to oncogenic human papillomavirus (HPV) infection is increasing, with a four-fold increase in the past 2 decades, and now thought to represent up to 30% of cases. The first effective target for SCCHN, the EGFR-targeting antibody cetuximab, was approved as recently as in 2006; since then, a growing body of research has identified additional signaling pathways as important in disease pathogenesis, and in resistance to treatment. Proteins such as c-Met, Src, and HER2 are emerging as new therapeutic targets, with a considerable ferment in the clinical trial community. As a capstone of research progress, 2011 marked the first reports of high throughput sequencing of SCCHN tumors, with these efforts identifying unexpected players such as Notch as frequent subject of mutation, spawning new hypotheses for future research. This book will be of interest to researchers who are interested in better understanding the biology of head and neck cancers, with the goals of better designing therapies, identifying risk factors, or investigating the molecular basis of the disease.
